

S&P Global Platts and Viridios Capital to add transparency to Voluntary Carbon Credit Markets

MOU will create new voluntary carbon credit and co-benefits indices leveraging AI

LONDON and SINGAPORE, Feb. 24, 2021 /PRNewswire/ -- S&P Global Platts ("Platts"), the leading independent provider of information and benchmark prices for the commodities and energy markets, today announced that it has signed a Memorandum of Understanding with Viridios Capital to launch a series of Artificial Intelligence ("AI") driven carbon indices to enhance transparency into the complex voluntary carbon credits and co-benefit markets.

Jonty Rushforth, head of price group, S&P Global Platts said: "The complex voluntary carbon markets are evolving at a rapid rate. Combining Platts robust and trusted price assessment data insight alongside Viridios Capital's proven environmental AI technology will provide market participants with greater transparency into the market value of voluntary carbon credits and their associated co-benefits".

Co-benefits are terms attached to carbon credits providing evidence of meeting the 17 Sustainable Development Goals (SDGs) defined by the United Nations General Assembly in 2015, including gender equality, clean water and biodiversity. The large number of factors such as project technology, geography and SDGs present significant challenges in determining the value of credits and a robust AI modelled approach will bring a new level of clarity to market participants.

Under the terms of the agreement, Platts will co-create a series of AI-driven carbon indices to enhance transparency into voluntary carbon credits and co-benefits. The new indices will leverage environmental AI expertise provided by Viridios Capital, which has been trained on over 20,000 data points representing transactions from across the range of carbon projects around the world. The model will also include daily inputs from a range of Platts price assessment data to produce evaluations for sets of credits with specified co-benefits including project types, vintages, locations and standards.

Eddie Listorti, CEO and co-founder of Viridios Capital said: "We are proud to partner with S&P Global Platts in bringing pricing transparency to the voluntary carbon markets through our AI technology. We are confident that the outcome will be to greatly assist companies to invest more in mitigating their environmental and social footprint while facilitating the flow of capital into urgent climate and sustainability initiatives".

The new assessments will complement Platts growing suite of voluntary carbon price assessments including the [Platts CEC](#), which reflect the daily value of CORSIA-eligible carbon credits, and was successfully launched in January 2021.

About S&P Global Platts
