S&P Global Commodity Insights' OSDU®-Data-Platform-compatible* upstream data is now available to energy companies and others on AWS in a way that decouples data from application-specific formats and allows for cross-application plug-and-play -- putting data how and where needed. The cloud access facilitates high-quality data, seamless data interoperability, and easy integration solutions. It allows a company to integrate S&P Global Commodity Insights Upstream content easily with its own proprietary data and/or 3rd party proprietary data on one platform, making an entire company catalog available across the organization to power workflows in compatible applications.

Joerg Gerth, Vice President, Channel Partners, S&P Global Commodity Insights, said: "We're proud to be offering another avenue by which we meet our customers where they are. By leveraging the power of S&P Global Commodity Insights trusted data and tools and enhanced with scalability and reliability of the AWS cloud, this solution enables companies to make faster, more informed decisions, driving efficiency, collaboration, and adaptability."

The new access to S&P Global Commodity Insights' world-class OSDU®-Data-Platform-compatible global upstream data that's loaded into Energy Data Insights on AWS for the OSDU® Data Platform will benefit the oil and gas industry in a number of ways, including further facilitation of generative AI and energy transition by:

- Providing cloud access to S&P Global Commodity Insights data for machine learning
- By having the best, most comprehensive data curated in one place, it supports accuracy and faster analysis
- Aiding energy transition workflows through broad coverage of subsurface and commercial upstream content

In addition, AWS and S&P Global Commodity Insights will provide access to S&P Global Commodity Insights' Kingdom™ Geoscience Software that enables geoscientists, for example, to easily execute compute-intensive subsurface interpretation workflows like geophysical and geological analyses, automated fault interpretations, advanced data analytics, and machine learning applications.

Howard Gefen, General Manager of Energy & Utilities at AWS, said: "Our collaboration with S&P Global Commodity Insights will unlock innovative, data-driven possibilities for our joint customers. By integrating with AWS's Energy Data Insights solution, based on AWS's cloud technologies, we will together act as a catalyst for global energy companies' decision-making and elevate their analytical capabilities, enabling informed, strategic

investment decisions for sustainable energy sector growth."

This not only facilitates faster subsurface interpretations but also unlocks invaluable insights, fostering enhanced performance and seamless collaboration across exploration, exploitation, and energy transition projects."

S&P Global Commodity Insights has worked with AWS to make at least 30 datasets available through the cloud, including such as S&P Global Commodity Insights' Platts Market Data packages for energy transition, shipping, nuclear, metals, power and gas, LNG, petrochemicals, agriculture, oil and refined products, as well as other supply, demand, arbitrage, forward curve, outages and other data.

Today's collaboration agreement builds on a long-time relationship between S&P Global (NYSE: SPGI) and AWS on strategic initiatives, such as the collaboration with S&P Global's Enterprise Data Management solution (EDM) and exploring new areas for collaboration on integrated go-to-market approaches, product development and channel distribution. The relationship between the companies was extended last year by advancing secure, cloud-based services to more than 100,000 of S&P Global's government and enterprise customers in 43 countries around the world.

**The OSDU® Forum created a universal schema that simplifies and standardizes data for access through the OSDU® Data Platform. Such collation and standardization historically have been labor-intensive processes for upstream operators*
